EXAMINER

KLIMOWICZ, WILLIAM JOSEPH

ART UNIT

PAPER NUMBER

2652

DATE MAILED: 11/17/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/053,271	Applicant(s) TADEPALLI ET AL.	
	Examiner William J. Klimowicz	Art Unit 2652	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 September 2004.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-8 and 11-23 is/are pending in the application.
- 4a) Of the above claim(s) 4-7, 13, 14, 17, 18 and 22 is/are withdrawn from consideration.
- 5) ☒ Claim(s) 1-3, 8, 11, 12, 15, 16, 19-21 and 23 is/are allowed.
- 6) ☐ Claim(s) _____ is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 17 January 2002 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 27, 2004 has been entered.

Claim Status

Claims 1-8 and 11-23 are currently pending.

Claims 4-7, 13, 14, 17, 18 and 22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 4 (filed September 25, 2003).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2652

Claims 1-3, 8, 11, 12, 15, 16, 19-21 and 23 are rejected under 35 U.S.C. 102(e) as being anticipated by Shiraishi et al. (US 6,144,530).

As per claim 1, Shiraishi et al. (US 6,144,530) discloses a data storage device (e.g., “magnetic disk drive unit” - COL. 1, line 17) for storing and accessing data, the storage device comprising: a motor (not expressly shown, but inherently and necessarily provided in order to rotate the “magnetic disk” in the “magnetic disk drive unit” in order to fly the “slider” above the disk in a well known and recognized manner - COL. 1, lines 10-17); at least one movable medium (i.e., “magnetic disk” - COL. 1, line 13) coupled to the motor and capable of being moved by the motor and thereby generating a turbulent airflow (such as the airflow which is used in part for the air-cooled radiator member (23)); and a slider support (including (10)) formed of a track accessing arm (e.g., a “movable arm” - COL. 1, line 17) and a suspension (10) and comprising at least one surface (23) comprising at least two grooves (23a), each groove (23a) having a groove axis oriented substantially perpendicular to a mean airflow direction (in the aforementioned disk drive, air would impinge in a slightly skewed manner perpendicularly to grooves (23a) as the slider radially access the aforementioned magnetic disk) and separated from the other groove axis in a direction substantially parallel to the mean airflow direction so as to cause vortices in a turbulent airflow generated by the medium (“magnetic disk”) to be kept distant from the surface. That is, the structure of the air-cooled radiator (23) includes the grooves (e.g., 23a, 63a) which are perpendicular to air flow generated by the disk. The grooves are of a V-shape (e.g., see FIG. 6) and thus produce vortices above and away from the surface by the negative pressure pockets that interact with the turbulent airflow which impinges upon the multi-grooved structure.

Art Unit: 2652

As per claim 2, wherein the surface (23) comprises at least three evenly spaced grooves (e.g., see, *inter alia*, FIG. 6).

As per claims 3, 12 and 21, wherein the grooves are V-shaped (e.g., see, *inter alia*, FIG. 6).

As per claim 8, wherein the surface forms part of a suspension (e.g., see, *inter alia*, FIG. 3).

Additionally, as per claim 11, Shiraishi et al. (US 6,144,530) discloses a surface (15) for a component of a structure that supports a slider (12) in the data storage device, the surface (15) comprising: a first groove (23a or 63a) having a groove axis that is substantially perpendicular to a direction of expected mean air flow (see discussion of claim 1, *supra*); and a second groove (another groove of 23a or 63a) proximate the first groove and having a groove axis that is substantially perpendicular to the expected mean air flow (see discussion of claim 1, *supra*) and that is separated from the first groove axis in a direction that is substantially parallel to the expected mean air flow such that the first and second grooves cooperate to keep vortices in the air flow some distance from the surface (15).

As per claim 15, wherein the surface (15) forms part of a suspension (10).

As per claim 16 wherein the first groove borders the second groove (e.g., see, *inter alia*, FIGS. 3, 6).

Additionally, as per claim 19, excitation reduction means for reducing the excitation of the surface by causing eddies in the airflow to be moved away from the surface, is construed as corresponding to the structure (or equivalents thereof) in the Applicants' specification, corresponds to structure of Shiraishi et al. (US 6,144,530) which discloses at least two grooves

Art Unit: 2652

(23a), each groove (23a) having a groove axis oriented substantially perpendicular to a mean airflow direction (in the aforementioned disk drive, air would impinge in a slightly skewed manner perpendicularly to grooves (23a) as the slider radially access the aforementioned magnetic disk) and separated from the other groove axis in a direction substantially parallel to the mean airflow direction so as to cause vortices in a turbulent airflow generated by the medium ("magnetic disk") to be kept distant from the surface. That is, the structure of the air-cooled radiator (23) includes the grooves which are perpendicular to air flow generated by the disk. The grooves are of a V-shape (see FIG. 6) and thus produce vortices above and away from the surface by the negative pressure pockets that interact with the turbulent airflow which impinges upon the multi-grooved structure.

As per claim 20, wherein the excitation reduction means comprises grooves (e.g., 23a, 63a) on the surface (15).

As per claim 23, wherein the grooves are evenly spaced (e.g., see FIGS. 3 and 6).

Response to Arguments

Applicants' arguments made in the submission originally filed May 27, 2004, with respect to claims 1-3, 8, 11, 12, 15, 16, 19-21 and 23 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2652

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William J. Klimowicz whose telephone number is (703) 305-3452. The examiner can normally be reached on Monday-Thursday (6:30AM-5:00PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hoa T. Nguyen can be reached on (703) 305-9687. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
